

Automation Engineer

Level 1

Exercise Prerequisites

Create Workspace

Objective

By the end of this exercise, you will be able to create a single user Workspace and use a Subset as a Workspace Template.

Why is this Important?

Each project will have its own Workspace. Subsets allow you to import and export Tosca artifacts, for example the Tricentis Standard Modules.

Instructions

1. Download the Base Subset: **AE1_Base_Subset.tsu** from the **Downloads** section of this Exercise

2. Open Tosca Commander, Create a new single user Workspace and name it **AE1 Exercises**.
 - Use the Base Subset **AE1_Base_Subset.tsu** as your Template by checking the box 'Use Workspace template'.
 - Click OK.
The window will close automatically once your Workspace has been successfully created.

3. Navigate to the path **AE1 Exercises>>Modules>>Standard modules>> TBox XEngines**
All the Engine specific standard modules are stored here for example – Excel Engine, PDF Engine, Mail Engine etc.
